

SPLIT FEED ROLLER SWIPES

New swipe design for the 90AD Extruder allows replacement without removing the feed roller shaft.

Feed roller swipes can now be replaced as easily as feed roller shoes. This new design splits the swipe into two mating halves that bolt together around the shaft. Removing the feed roller shaft, bearings cartridges, and grease seals is no longer necessary.

The new Split Feed Roller Swipes are a direct replacement for the single piece swipes and do not require any changes to the feed roller shaft.

Plowbolts lock in place - will not rotate during assembly/disassembly

Reduce your maintenance time by installing the new Split Feed Roller Swipes.
