

STEELE APS 33/36 REAR PUGKNIFE

New rear pugknife clears dirt from rear tub seal, lasts longer, and is easy to replace.

This knife utilizes the patented Steele "APS" design, while incorporating several enhancements to adapt it to the demanding rear knife position.

The shank is high strength steel and is designed to minimize bending moments due to the high pitch of this knife. The wear-resistant 28PC Chrome alloy knife blade has more material in the high wear areas and fully protects the shank. The shank can remain in place almost indefinitely while the knife blade is periodically replaced for wear.

The larger blade does a better job of removing material from the rear bulkhead and of conveying material forward to the next pugknife. By reducing the load on the second-to-last pugknife, in many cases, it will last longer as well.

The new Steele APS 33/36 Rear Knife can be installed in the following machines:

- 75AD Pug Sealer
- 75ADC Combined Machine
- 90BD Pug Sealer
- 90BDDV Double Vacuum Pug Sealer
- 5075 Mixer
- 300F Special Pugmill
- 300F Jumbo Pugmill

Get longer life, better performance, and reduced maintenance time by installing the new APS 33/36 Rear Pugknife from J.C. Steele & Sons.
