The Steele L Die
Our toughest, most flexible die

The Steele L Die combines innovation and flexibility in a high-efficiency stiff extrusion die system. It’s the first die with a bridge that can be removed from the front for fast changes. The overall length and internal profile varies with mid-base and shaper cap options, making the L Die well suited for a range of raw materials and products.

Steele offers complete die solutions, including dies, bridges, coring, column trimmers and lubrication systems for solids, pavers and various coring patterns.

Contact us at 800.278.3353 for delivery.

Bridge adjusts during operation
Bridge replaces from front
Optional liners for longer wear
No leaks — less oil usage
No grease gun needed

Complete die accessories
Complete die lubrication systems
  • Die lube manifold
  • V-1 die oiling system
  • V-2 die oiling system
Column balance frames
Column wire or blade trimmer frames
Tungsten carbide frog plates (scoring plates)

The L Die assembly can extrude a maximum column size of 5-1/4 x 10-3/4 inches (127mm x 254mm)

The Global Leader in Stiff Extrusion
Research and development in wear resistant materials

Steele focuses on ways to improve durability and extend the service life of our die products. We now offer innovations such as:

▶ Ceramic lined shaper caps
▶ Tungsten carbide scoring plates
▶ Vanadium tool steel liner plates
▶ Silicon carbide core tips

We also handle specific customer requests for material selection and engineering.
