The Steele L Short Die
A minimum length die specifically designed for plastic materials

The L Short Die offers the same features of the L Die, using a minimum-length die assembly for plastic materials. The short die length allows fine particles in plastic materials to form more easily, improving compaction and reducing required amperages for energy savings. Front bridge replacement permits fast changes and adjustments during operation.

Steele offers complete die solutions, including dies, bridges, coring, column trimmers and lubrication systems for solids, pavers and various coring patterns.

Contact us at 800.278.3353 for delivery.
Research and development in wear resistant materials

Steele focuses on ways to improve durability and extend the service life of our die products. We now offer innovations such as:

▶ Ceramic lined shaper caps
▶ Tungsten carbide scoring plates
▶ Vanadium tool steel liner plates
▶ Silicon carbide core tips

We also handle specific customer requests for material selection and engineering.

Better lubrication and easier operation
